

INSTRUCTIONS FOR USE

OMNIA® SILICONE MOLDS

All Omnia silicone molds are made from BPA-free silicone and comply with FDA (U.S. Food and Drug Administration) and LFGB (Lebensmittel- und Futtermittelgesetzbuch) standards.

INSTRUCTIONS FOR USE

Before using the silicone mold for the first time, wash it in warm water with detergent and dry thoroughly. Lubricate the inside with oil or grease to enhance the natural nonstick properties of the silicone mold.

We recommend that the silicone mold be washed with detergent before each use to enhance the non-stick properties. Cakes slip out more easily if the mold is greased with a little grease or oil. Cleaning tips can be found on the website under Q&A.

Place the silicone mold inside the Omnia mold before adding ingredients for better stability.

- Can be used separately in a microwave.
- Dishwasher safe
- Suitable for freezing
- Avoid sharp tools, scouring pads, and similar.
- Wash and dry after use.

WARNING

Both the silicone mold and Omnia mold get very hot. Be careful – always use a potholder or similar.

NOTE

Temperature range min. -30°C/-22 °F, max. 260°C/500 °F. If the temperature is too high, the silicone will be damaged.

Don't let the silicone mold come into contact with an open flame, stovetop, or grill.

Follow your oven's instructions for proper handling.
